

Infinity™ System by Carrier

How about global cooling?

The most commercial air conditioning contracts awarded for the 2008 Beijing Olympics.

Supermarket and transportation refrigeration in India.

The Infinity System, the most energy efficient* heating and cooling system you can buy.

All by Carrier.

The next hybrid everyone will be talking about.

The Hybrid Heat® dual-fuel system by Carrier switches automatically between gas and electricity, allowing operation at the lowest possible cost. We factor in local weather and fuel prices to determine the temperatures at which the system should switch to maximize savings for homeowners.

Smaller is better.

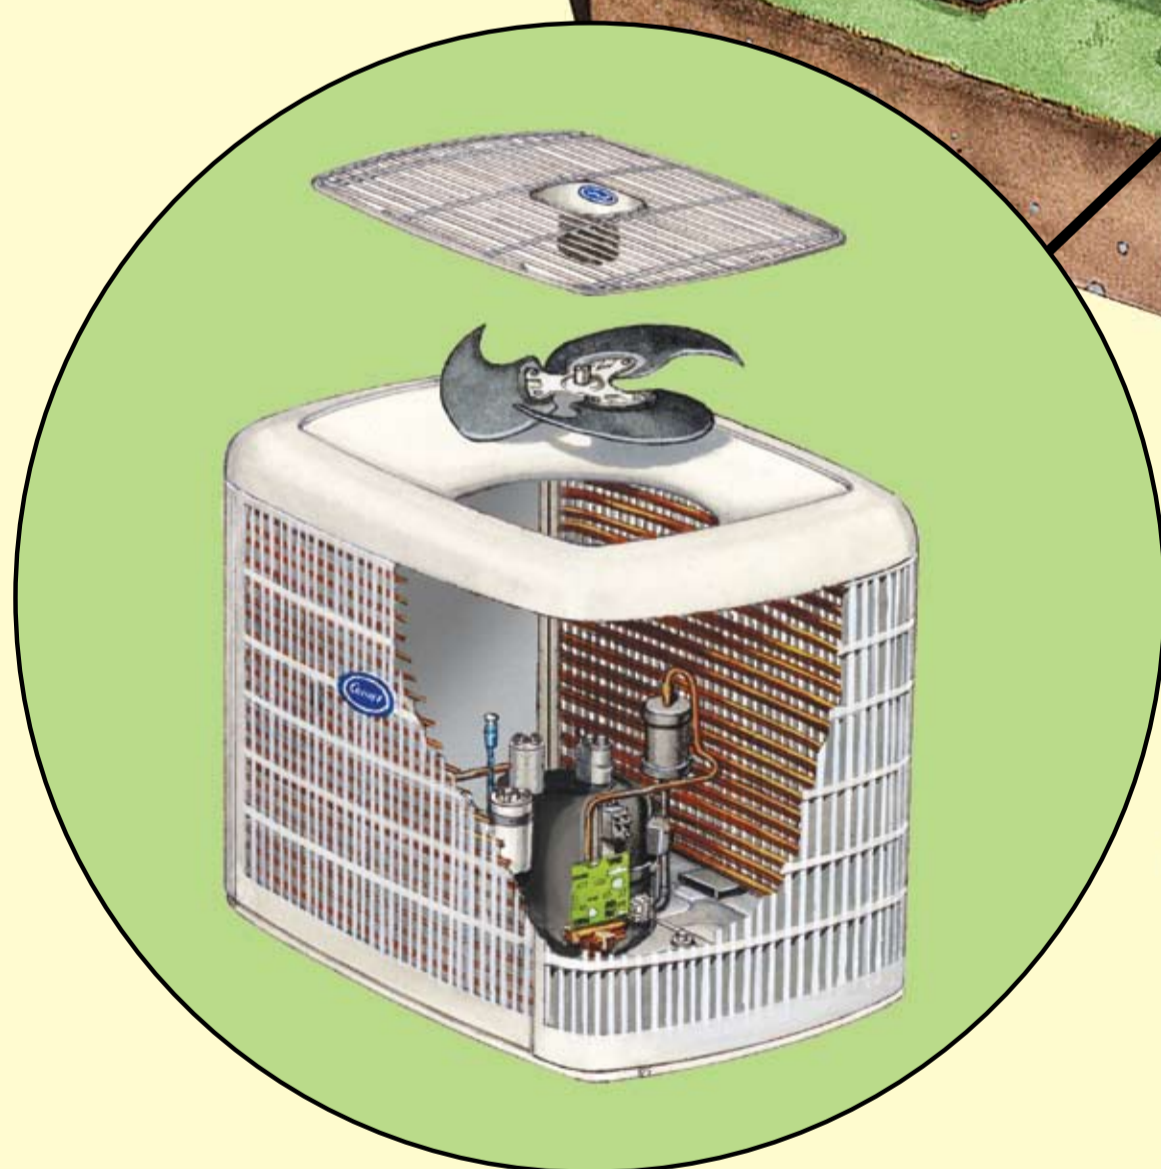

The way to get more efficiency in air conditioning systems is to add heat exchanger surface. When we moved to the new federal energy standard three years ago, Carrier redesigned its 13 SEER heat exchangers entirely. The result: today's Carrier 13 SEER units are 20% smaller, 30% lighter, and use 40% less refrigerant.

The father of cool.

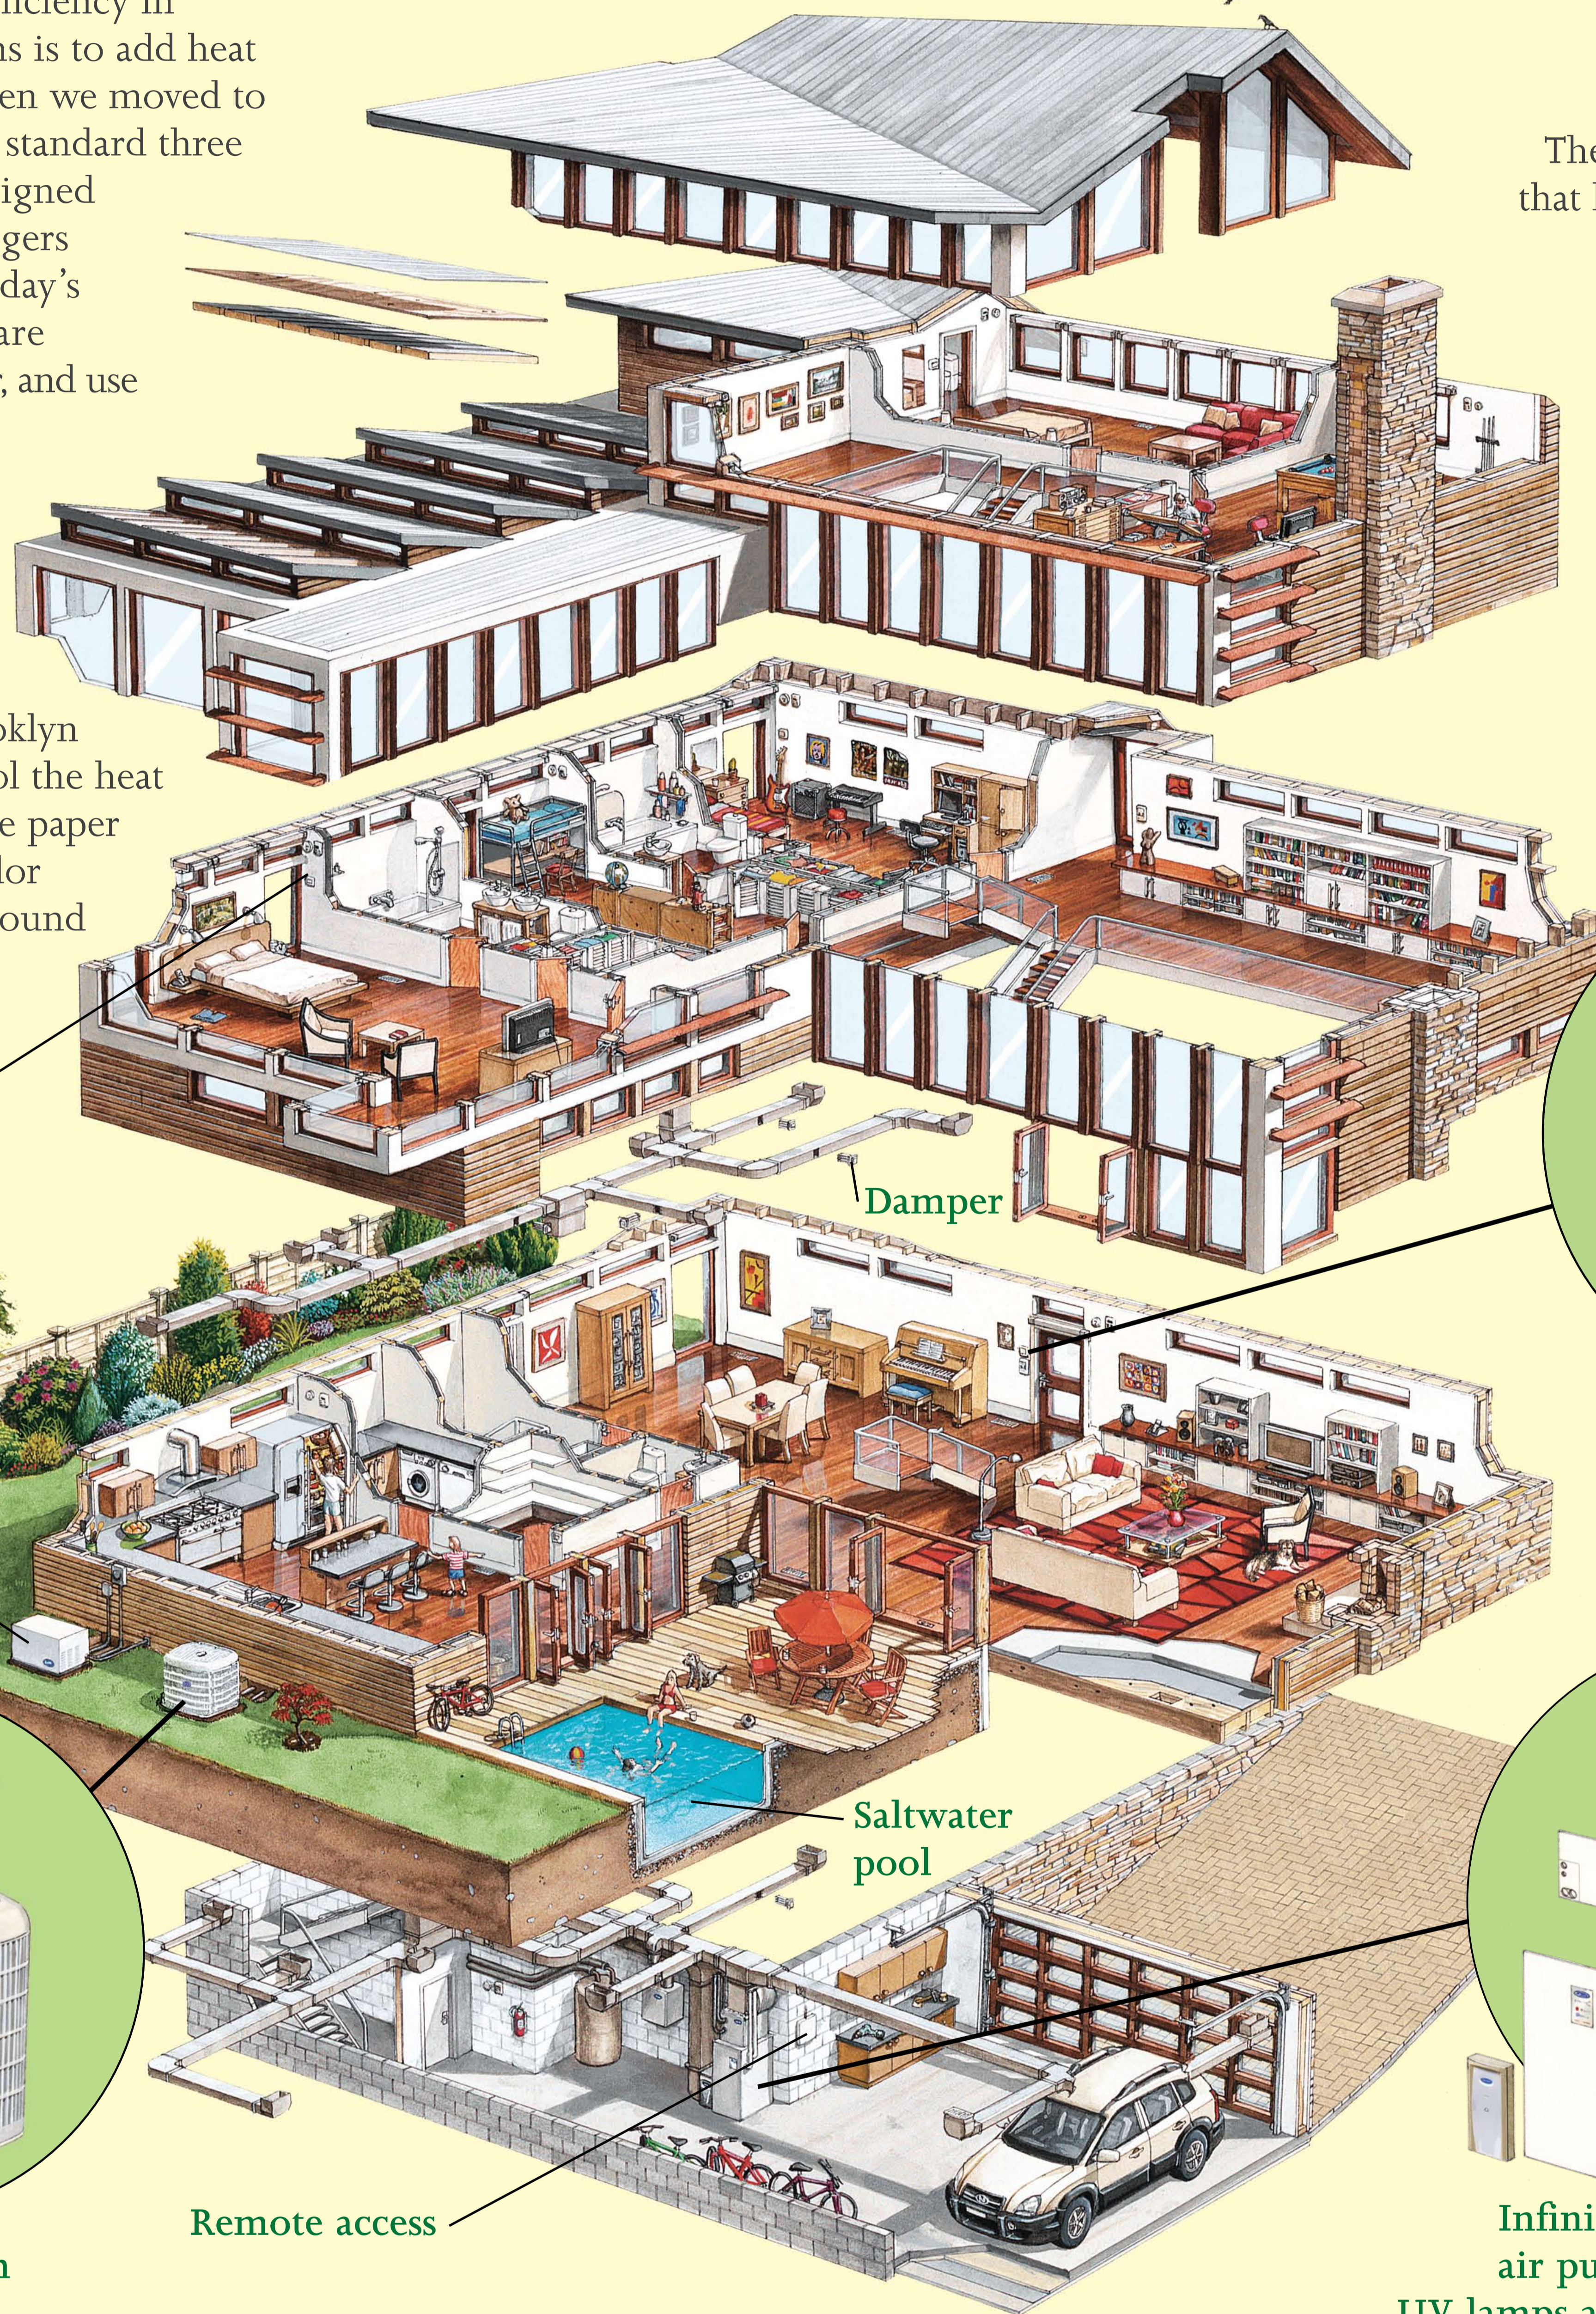

In 1902, Willis Carrier invented modern air conditioning for a Brooklyn printing plant to control the heat and humidity that made paper unstable and caused color inks to misalign. Year round comfort and four color printing were born.

Smart sensor

Automatic home standby generator

Infinity System heat pump

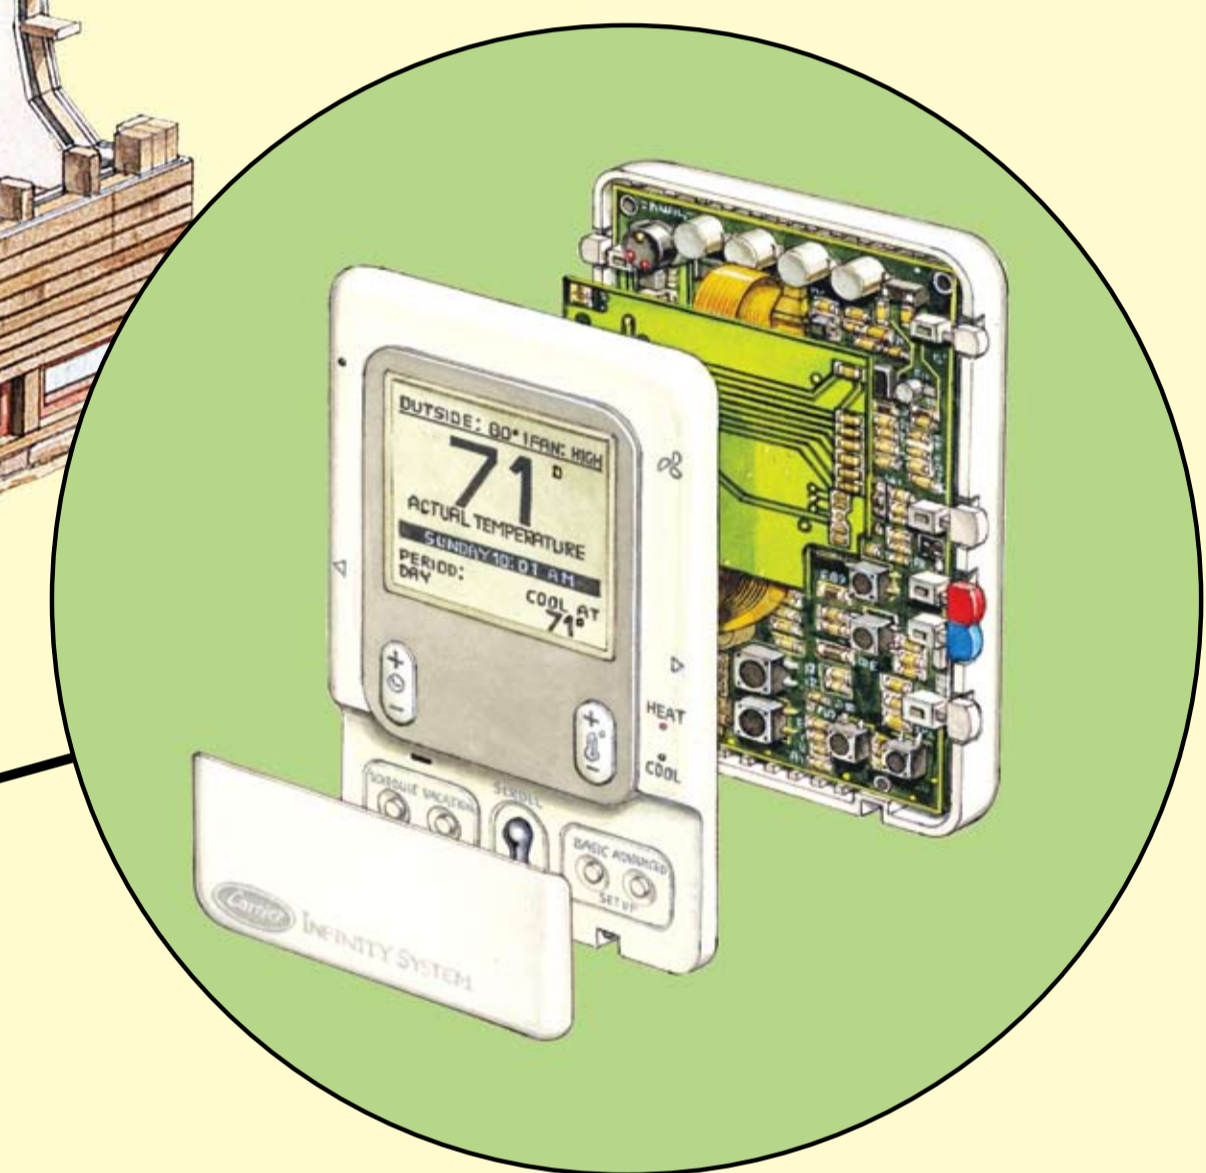

What Carrier Infinity controls do for you.

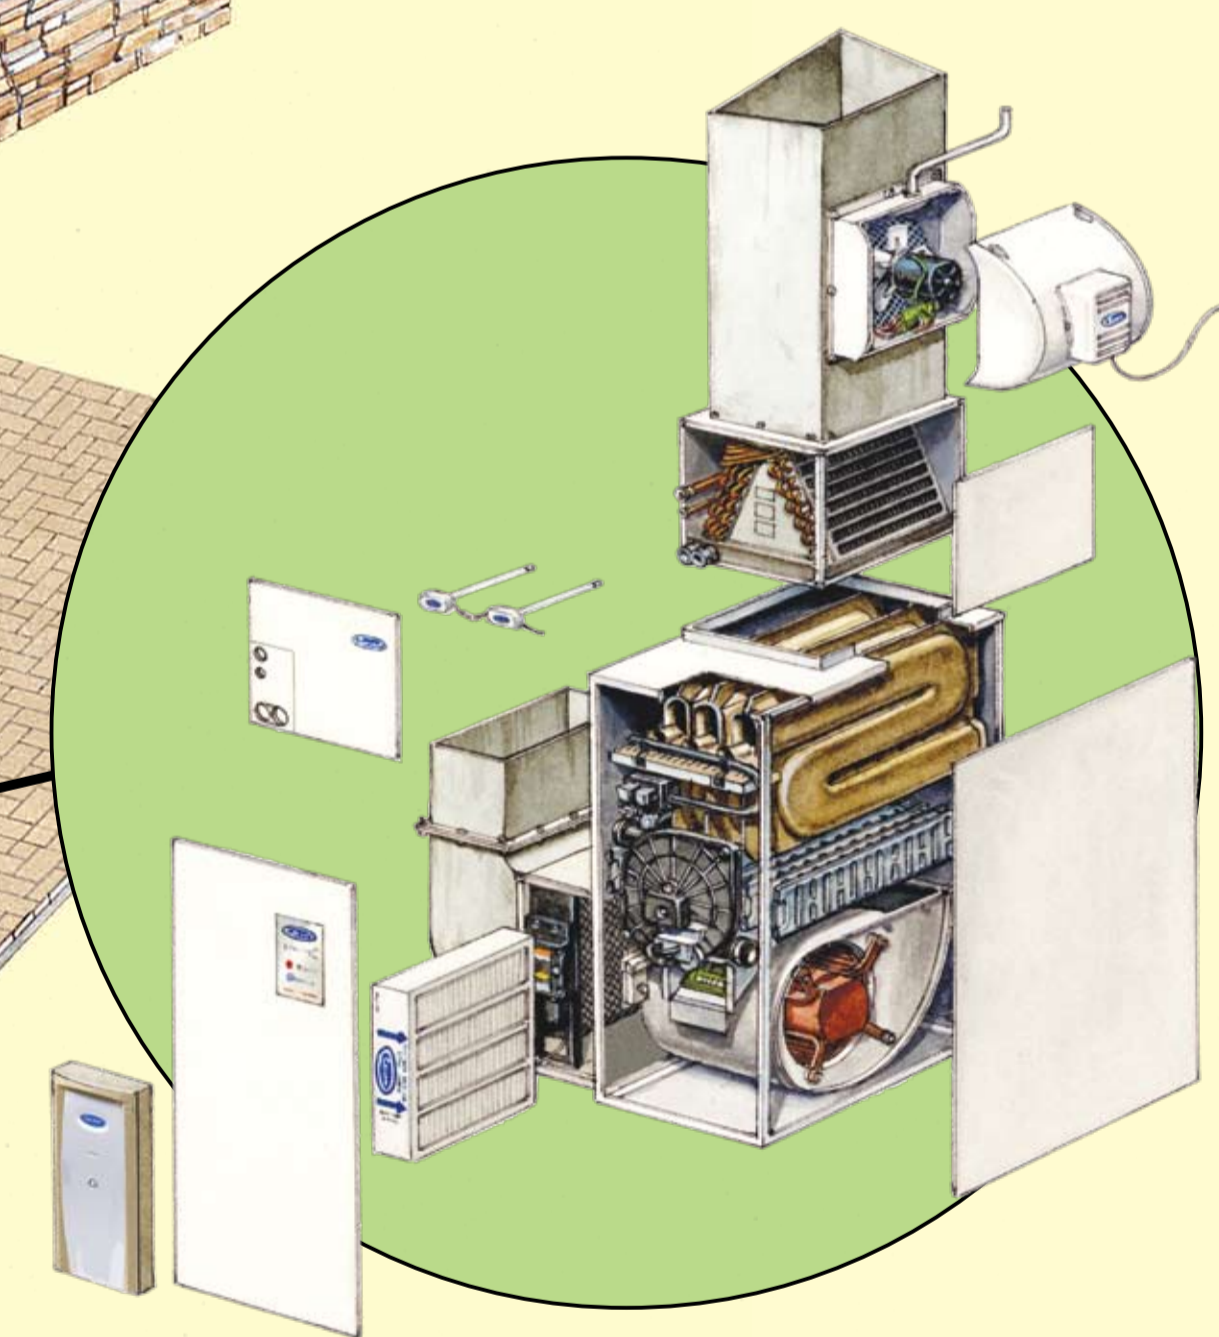

The only system in the industry that lets you control temperature, humidity and air quality, both on site and remotely by phone or laptop.

Whatever you want.

Carrier's residential systems are available with zone control to easily cool, or heat, individual spaces even when served by a single outdoor unit.

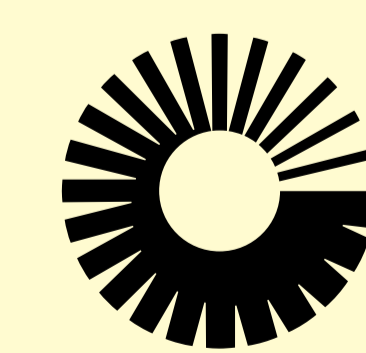

Zone control

Infinity System gas furnace, air purifier, evaporator coil, UV lamps and whole house humidifier

WHERE EFFICIENCY LIVES.

You sit, cool in your house on a 90°F day and enjoy a kiwi from New Zealand, both thanks to Carrier. You stay cool as you watch your favorite team fumble via satellite, launched courtesy of Pratt & Whitney rocket engines. You change channels and catch breaking news of a raging forest fire as a Sikorsky helicopter douses the flames. Throughout, you're cool. United Technologies, a globally balanced company where passion, precision and a lot of cool stuff come together. Visit utc.com.
