

PRODUCTS

UTC's products convert energy into useful work, so we are passionate about reducing our products' energy use and developing innovative, energy efficient technologies that help reduce our customers' environmental footprints.

**Clinton Climate Initiative Picks a UTC Partners*****Carrier joins UTC Power as official Supply Partners to the Clinton Climate Initiative***

In February 2008, Carrier signed an MOU with the CCI to provide its energy-efficient, non-ozone-depleting, water-cooled chillers to qualified C40 cities and private building owners in the C40. Carrier was the first HVAC company to sign an MOU with the CCI for energy-efficient products. The MOU results in discounts on these products to C40 cities and other CCI partners, thereby improving the payback on chiller replacements.

The MOU is aligned with the CCI Energy Efficiency Building Retrofit Program, launched May 2007, that provides cities and private building owners with access to financing terms to retrofit existing buildings with more energy-efficient systems.

"Both Carrier and CCI recognize that it is imperative to accelerate the adoption of new, affordable, energy-saving technologies in the C40 cities which comprise nearly half of the global population, consume 75 percent of the world's energy, and produce nearly 80 percent of its greenhouse gas emissions," said Kelly Romano, president, Building Systems and Services (BSS), Carrier Corp.

Under the program, Carrier will leverage its global sales and distribution organization to provide technical support and systems design, in addition to offering water-cooled chillers for replacement equipment, in response to tenders issued by CCI-approved entities such as mechanical contractors and energy service companies.

In November 2007, UTC Power was chosen to be an official supplier partner CCI. UTC Power is providing its advanced power systems, including its fuel cell technology used in transportation and on-site power applications.

CCI is serving as the exclusive implementing partner of the C40 Large Cities Climate Leadership Group, an association of large cities around the world that have pledged to accelerate their efforts to reduce greenhouse gas emissions. In this capacity, CCI is working with partner cities to develop and implement large scale projects to improve energy efficiency and directly reduce greenhouse gas emissions in buildings, waste management, transportation, outdoor lighting, ports, and other areas.
